# THE GREENSTICK CATCHES A LOT OF FISH

**POP FISHING & MARINE in Honolulu, Hawaii has partnered with Japan manufacturer HOPEC, the creators of the original Hamaguchi Greenstick, to unveil the next generation Greenstick to the fishing world.**

*"The Bird" - the highly designed anchor of the Greenstick system.*

*There are currently 2 models in various lengths up to 46 feet. A new "light stick" model has a smaller diameter for smaller boats.*

The Greenstick tows a 150-yard mainline that suspends 4-6 artificial lures on branchlines that splash and dip on the water surface. This is known to drive big hungry tuna crazy. Upon a fish strike, the mainline breaks away from the Greenstick and the angler fights the fish using hydraulic or electric reels, a modified 130lb class trolling rod and reel or even by hand. Double and triple-strikes on this rig are not unheard of. Catch more fish and have more fun doing it with a Greenstick from POP.

*One of the keys to this successful fishing system is the "action line", which creates the up and down dipping action of the dangling branchlines.*
